PERMANENT AND TEMPORARY SOLUTION STATEMENT
Pursuant to 310 CMR 40.1000 (Subpart J)

Release Tracking Number
3 - 36458

For sites with multiple RTNs, enter the Primary RTN above.

A. SITE LOCATION:

- 1. Site Name/Location Aid: CORNER OF MASS AVE. & WALDEN ST.
- 2. Street Address: 2072 MASSACHUSETTS AVENUE
- 3. City/Town: CAMBRIDGE 4. ZIP Code: 021400000
- 5. Coordinates: a. Latitude: N 42.39106 b. Longitude: W 71.12328
- 6. Check here if the disposal site that is the source of the release is Tier Classified. Check the current Tier Classification Category:
 a. Tier I b. Tier ID c. Tier II

B. THIS FORM IS BEING USED TO: (check all that apply)

- 1. List Submittal Date of the Permanent or Temporary Solution Statement, or RAO Statement (if previously submitted): _____ mm/dd/yyyy
- 2. Submit a **Permanent or Temporary Solution Statement**
 - a. Check here if this Permanent or Temporary Solution Statement covers additional Release Tracking Numbers (RTNs). RTNs that have been previously linked to a Tier Classified Primary RTN do not need to be listed here.
 - b. Provide the additional Release Tracking Number(s) covered by this Permanent or Temporary Solution Statement. - -
- 3. Submit a **Revised Permanent or Temporary Solution Statement** (or revised RAO Statement)
 - a. Check here if this Revised Permanent or Temporary Solution Statement covers additional Release Tracking Numbers (RTNs), not listed on the Permanent or Temporary Solution Statement or previously submitted Revised Permanent or Temporary Solution Statements. RTNs that have been previously linked to a Tier Classified Primary RTN do not need to be listed here.
 - b. Provide the additional Release Tracking Number(s) covered by this Permanent or Temporary Solution Statement. - -
- 4. Submit a **Permanent or Temporary Solution Partial Statement**

Check above box, if any Response Actions remain to be taken to address conditions associated with this disposal site having the Primary RTN listed in the header section of this transmittal form. This Permanent or Temporary Solution Statement will record only a Permanent or Temporary Solution-Partial Statement for that RTN. A final Permanent or Temporary Solution Statement will need to be submitted that references all Permanent or Temporary Solution-Partial Statements and, if applicable, covers any remaining conditions not covered by the Permanent or Temporary Solution-Partial Statements.

Also, specify if you are an Eligible Person or Tenant pursuant to M.G.L. c. 21 s.2, and have no further obligation to conduct response actions on the remaining portion(s) of the disposal site:

 - a. Eligible Person b. Eligible Tenant
- 5. Submit a **Revised Permanent or Temporary Solution Partial Statement** (or revised RAO-Partial Statement)
- 6. Submit an optional **Phase I Completion Statement** supporting the Permanent or Temporary Solution Statement
- 7. Submit a **Periodic Review Opinion evaluating the status of a Temporary Solution**, as specified in 310 CMR 40.1051 (Section F is optional)
- 8. Submit a **Retraction** of a previously submitted **Permanent or Temporary Solution Statement** (or RAO Statement) (Sections E & F are not required)

(All sections of this transmittal form must be filled out unless otherwise noted above)

PERMANENT AND TEMPORARY SOLUTION STATEMENT
Pursuant to 310 CMR 40.1000 (Subpart J)

Release Tracking Number

3 - 36458

For sites with multiple RTNs, enter the Primary RTN above.

C. DESCRIPTION OF RESPONSE ACTIONS: (check all that apply; for volumes, list cumulative amounts)

- 1. Assessment and/or Monitoring Only
- 2. Temporary Covers or Caps
- 3. Deployment of Absorbent or Containment Materials
- 4. Treatment of Water Supplies
- 5. Structure Venting System/HVAC Modification System
- 6. Engineered Barrier
- 7. Product or NAPL Recovery
- 8. Fencing and Sign Posting
- 9. Groundwater Treatment Systems
- 10. Soil Vapor Extraction
- 11. Remedial Additives
- 12. Air Sparging
- 13. Active Exposure Pathway Mitigation System
- 14. Passive Exposure Pathway Mitigation System
- 15. Monitored Natural Attenuation
- 16. In-Situ Chemical Oxidation
- 17. Removal of Contaminated Soils

- a. Re-use, Recycling or Treatment
 - i. On Site Estimated volume in cubic yards _____
 - ii. Off Site Estimated volume in cubic yards _____

ii. Facility Name: _____ Town: _____ State: _____

iii. Describe: _____

b. Landfill _____

- i. Cover Estimated volume in cubic yards _____

Facility Name: _____ Town: _____ State: _____

- ii. Disposal Estimated volume in cubic yards _____

Facility Name: _____ Town: _____ State: _____

18. Removal of Drums, Tanks or Containers:

a. Describe Quantity and Amount:

b. Facility Name: _____ Town: _____ State: _____

c. Facility Name: _____ Town: _____ State: _____

19. Removal of Other Contaminated Media:

a. Specify Type and Volume:

b. Facility Name: _____ Town: _____ State: _____

c. Facility Name: _____ Town: _____ State: _____

PERMANENT AND TEMPORARY SOLUTION STATEMENT

Pursuant to 310 CMR 40.1000 (Subpart J)

Release Tracking Number

3 - 36458

For sites with multiple RTNs, enter the Primary RTN above.

C. DESCRIPTION OF RESPONSE ACTIONS (cont.): (check all that apply; for volumes, list cumulative amounts)

20. Other Response Actions:

Describe:

21. Use of Innovative Technologies:

Describe:

D. SITE USE:

1. Are the response actions that are the subject of this submittal associated with the *redevelopment, reuse* or the *major expansion of the current use* of property(ies) impacted by the presence of oil and/or hazardous materials?

- a. Yes b. No c. Don't know

2. Is the property a *vacant or under-utilized commercial or industrial* property ("a brownfield property")?

- a. Yes b. No c. Don't know

3. Will funds from a state or federal brownfield incentive program be used on one or more of the property(ies) within the disposal site?

- a. Yes b. No c. Don't know If Yes, identify program(s): _____

4. Has a Covenant Not to Sue been obtained or sought?

- a. Yes b. No c. Don't know

5. Check all applicable categories that apply to the person making this submittal:

- a. Redevelopment Agency or Authority
 b. Community Development Corporation c. Economic Development and Industrial Corporation
 d. Private Developer e. Fiduciary f. Secured Lender g. Municipality
 h. Potential Buyer (non-owner) i. Other, describe: _____

This data will be used by MassDEP for information purposes only, and does not represent or create any legal commitment, obligation or liability on the part of the party or person providing this data to MassDEP.

E. PERMANENT OR TEMPORARY SOLUTION CATEGORY:

Specify the category of Solution that applies to the Disposal Site, or Site of the Threat of Release. Select either **1, 2, or 3.**

- 1. Permanent Solution with No Conditions** (check one)
 a. A threat of release has been eliminated.
 b. All contamination has been reduced to Natural Background levels.
 c. A condition of No Significant Risk exists or has been achieved with no Activity and Use Limitation or other limitations, assumptions, or conditions (310 CMR 40.1013).

PERMANENT AND TEMPORARY SOLUTION STATEMENT
Pursuant to 310 CMR 40.1000 (Subpart J)

Release Tracking Number
3 - 36458

For sites with multiple RTNs, enter the Primary RTN above.

E. PERMANENT OR TEMPORARY SOLUTION CATEGORY (cont.):

- 2. Permanent Solution with Conditions** (check a and/or b):
 - a. **An AUL has been implemented** pursuant to 310 CMR 1012(2) (check one)
 - i. Required pursuant to 310 CMR 40.1012(2)

Is the AUL required because the Permanent Solution relies on an Active Exposure Pathway Mitigation Measure pursuant to CMR 310 40.1025?

1. Yes 2. No
 - ii. Optionally implemented pursuant to 310 CMR 40.1012(3)
 - b. **Limitations or conditions apply** pursuant to 310 CMR 40.1013 (check all that apply):
 - i. Gardening Best Management Practices (BMPs) for non-commercial gardening in a residential setting
 - ii. Concentrations of Oil and Hazardous Material consistent with Anthropogenic Background
 - iii. Residual contamination in a Public or Railroad Right-of-Way
 - iv. Groundwater contamination would exceed GW-2 Standards except for the absence of an occupied building or structure
- 3. Temporary Solution** (check a or b /and c)
 - a. Response actions to achieve a Permanent Solution **are not currently feasible**
 - b. Response actions to achieve a Permanent Solution **are feasible** and are being continued toward a Permanent Solution
 - c. Does the Temporary Solution rely on an Active Exposure Pathway Mitigation Measure pursuant to 310 CMR 40.1026?
 - i. Yes ii. No

F. PERMANENT AND TEMPORARY SOLUTION INFORMATION:

1. Specify the Risk Characterization Method(s) used to achieve the Permanent or Temporary Solution, described above:
 - a. Method 1 b. Method 2 c. Method 3
 - d. Method Not Applicable-Contamination reduced to or consistent with background, or Threat of Release abated
2. Specify all Soil Category(ies) applicable. More than one Soil Category may apply at a Site. Be sure to check off all **APPLICABLE** categories:
 - a. S-1/GW-1 d. S-2/GW-1 g. S-3/GW-1 j. Not Applicable
 - b. S-1/GW-2 e. S-2/GW-2 h. S-3/GW-2
 - c. S-1/GW-3 f. S-2/GW-3 i. S-3/GW-3
3. Specify all Groundwater Category(ies) impacted. A site may impact more than one Groundwater Category. Be sure to check off all **IMPACTED** categories:
 - a. GW-1 b. GW-2 c. GW-3 d. No Groundwater Impacted

PERMANENT AND TEMPORARY SOLUTION STATEMENT

Release Tracking Number

3 - 36458

For sites with multiple RTNs, enter the Primary RTN above.

F. PERMANENT AND TEMPORARY SOLUTION INFORMATION (cont.):

- 4. Check here if the risk assessment includes any changes to the groundwater category pursuant to 310 CMR 40.0932(5)(a) through (e). Check all conditions that apply:
 - a. An Interim Wellhead Protection Area does not apply based on a hydrogeologic evaluation (310 CMR 40.0932(5)(a))
 - b. Groundwater was determined not to be in a Potentially Productive Aquifer or is not feasible to be developed as a drinking water supply (310 CMR 40.0932(5)(b))
 - c. A Non-Potential Drinking Water Source Area determination was made (310 CMR 40.0932(5)(c))
 - d. Existing private wells were permanently closed (310 CMR 40.0932(5)(d))
 - e. Groundwater is located within a Zone A, but is not hydrogeologically connected to a drinking water supply (310 CMR 40.0932(5)(e))
- 5. Check here if the Permanent or Temporary Solution supports a finding of No Significant Risk for petroleum in a GW-1 area pursuant to 310 CMR 40.0924(2)(b)3.

6. Specify whether remediation was conducted:

- a. Check here if soil remediation was conducted.
- b. Check here if groundwater remediation was conducted.
- c. Check here if other remediation was conducted.

Specify:

7. Specify whether the analytical data used to support the Permanent or Temporary Solution used the Compendium of Analytical Methods (CAM):

- a. CAM used to support all analytical data.
- b. CAM used to support some of the analytical data.
- c. CAM not used.

8. Check here to indicate that the Permanent or Temporary Solution Statement includes a Data Usability Assessment and Data Representativeness Evaluation pursuant to 310 CMR 40.1056.

9. Estimate the number of acres this Permanent or Temporary Solution Statement applies to: 0.2

G. LSP SIGNATURE AND STAMP:

I attest under the pains and penalties of perjury that I have personally examined and am familiar with this transmittal form, including any and all documents accompanying this submittal. In my professional opinion and judgment based upon application of (i) the standard of care in 309 CMR 4.02(1), (ii) the applicable provisions of 309 CMR 4.02(2) and (3), and 309 CMR 4.03(2), and (iii) the provisions of 309 CMR 4.03(3), to the best of my knowledge, information and belief,

> if Section B indicates that either a **Permanent or Temporary Solution Statement, Phase I Completion Statement and/or Periodic Review Opinion** is being provided, the response action(s) that is (are) the subject of this submittal (i) has (have) been developed and implemented in accordance with the applicable provisions of M.G.L. c. 21E and 310 CMR 40.0000, (ii) is (are) appropriate and reasonable to accomplish the purposes of such response action(s) as set forth in the applicable provisions of M.G.L. c. 21E and 310 CMR 40.0000, and (iii) comply(ies) with the identified provisions of all orders, permits, and approvals identified in this submittal.

I am aware that significant penalties may result, including, but not limited to, possible fines and imprisonment, if I submit information which I know to be false, inaccurate or materially incomplete.

1. LSP#: 9185
2. First Name: SAMUEL W 3. Last Name: BUTCHER

I. RELATIONSHIP TO RELEASE OR THREAT OF RELEASE OF PERSON MAKING SUBMITTAL:

Check here to change relationship

1. RP or PRP a. Owner b. Operator c. Generator d. Transporter

e. Other RP or PRP Specify: _____

2. Fiduciary, Secured Lender or Municipality with Exempt Status (as defined by M.G.L. c. 21E, s. 2)

3. Agency or Public Utility on a Right of Way (as defined by M.G.L. c. 21E, s. 5(j))

4. Any Other Person Making Submittal Specify Relationship: _____

J. REQUIRED ATTACHMENT AND SUBMITTALS:

1. Check here if the Permanent or Temporary Solution on which this opinion is based, if any, are (were) subject to any order(s), permit(s) and/or approval(s) issued by DEP or EPA. If the box is checked, you MUST attach a statement identifying the applicable provisions thereof.

2. Check here to certify that the Chief Municipal Officer and the Local Board of Health have been notified of the submittal of a Permanent or Temporary Solution Statement that relies on the public way/rail right-of-way exemption from the requirements of an AUL.

3. Check here to certify that the Chief Municipal Officer and the Local Board of Health have been notified of the submittal of a Permanent or Temporary Solution Statement with instructions on how to obtain a full copy of the report.

4. Check here to certify that documentation is attached specifying the location of the Site, or the location and boundaries of the Disposal Site subject to this Permanent or Temporary Solution Statement. If submitting a Permanent or Temporary Solution Statement for a PORTION of a Disposal Site, you must document the location and boundaries for both the portion subject to this submittal and, to the extent defined, the entire Disposal Site.

5. Check here to certify that, pursuant to 310 CMR 40.1406, notice was provided to the owner(s) of each property within the disposal site boundaries, or notice was not required because the disposal site boundaries are limited to property owned by the party conducting response actions. (check all that apply)

a. Notice was provided prior to, or concurrent with the submittal of a Phase II Completion Statement to the Department.

b. Notice was provided prior to, or concurrent with the submittal of this Permanent or Temporary Solution Statement to the Department.

c. Notice not required. d. Total number of property owners notified, if applicable: _____

6. Check here if you are submitting one or more AULs. You must submit an AUL Transmittal Form (BWSC113) and a copy of each implemented AUL related to this Permanent Solution or Temporary Solution Statement. Specify the type of AUL(s) below: (required for Permanent Solution with Conditions Statements where an AUL is being implemented)

a. Notice of Activity and Use Limitation b. Number of Notices submitted: _____

c. Grant of Environmental Restriction d. Number of Grants submitted: _____

7. If a Permanent Solution Compliance Fee is required for any of the RTNs listed on this transmittal form, check here to certify that a Permanent Solution Compliance Fee was submitted to DEP, P. O. Box 4062, Boston, MA 02211.

8. Check here if any non-updatable information provided on this form is incorrect, e.g. Site Address/Location Aid. Send corrections to bwsc.edep@state.ma.us.

9. Check here to certify that the LSP Opinion containing the material facts, data, and other information is attached.

1. INTRODUCTION

Loureiro Engineering Associates, Inc. (Loureiro) prepared this Permanent Solution Statement to document activities performed for Release Tracking Number (RTN) 3-36458 at 2072 Massachusetts Avenue, Cambridge, Massachusetts (the Site). A Site Locus Map, Site Map and Massachusetts Geographic Information System (MassGIS) Priority Resource Map are provided as Figures 1, 2 and 3, respectively. This report submittal is prepared in accordance with the requirements for determining the sufficiency of Permanent Solution achievement as outlined in Section 310 CMR 40.1000 of the Massachusetts Contingency Plan (MCP). A condition of “No Significant Risk” exists and a Permanent Solution has been achieved at the location. The release meets a Permanent Solution with No Conditions Statement condition as per the MCP.

1.1 Release, Notification & Site Condition Description

The Site is located at 2072 Massachusetts Avenue in Cambridge, Massachusetts as presented in the attached Figure 1. The approximate geographic coordinates are: latitude W 71° 7' 23.7" and longitude N 42° 23' 27.9". The Site is accessible by vehicular traffic from Massachusetts Avenue and Walden Street. The Site is surrounded by commercial properties to the north, east and west, as well as residential properties to the south and east. Immediately abutting the property are the North Cambridge Senior Centre and Cambridge Housing Authority to the east, Massachusetts Avenue to the north, Walden Street to the west and a parking lot to the south. The Site consists of approximately 0.2 acres of land located in northern Cambridge. The Property is occupied by an 1,860 square foot single-story restaurant, a paved driveway, and paved parking area.

The topography across the Site is generally flat with a slight decrease in elevation to the west toward Walden Street. The Property is not located in a high or medium yield aquifer, and no high or medium yield aquifers are mapped within 1,000 feet of the Site. According to the Cambridge Board of Health, no drinking water wells are present within the Site's vicinity. The average depth to groundwater was measured to be 11.5 feet below ground surface (bgs).

On May 7, 2020, Loureiro oversaw the advancement of three soil borings by New England Boring Contractors (NEBC) of Derry, New Hampshire to perform soil pre-characterization in support of a planned redevelopment of the Site. With the understanding that the Site has limited storage

areas, soil was pre-characterized (i.e., prior to excavation) as an effort to expedite its excavation and offsite management. These geotechnical borings were completed concurrently with Loureiro's environmental investigation and identified as HA20-1, HA20-2 and HA20-3. Soil borings were advanced using a truck-mounted GEFECO Strata Star 15 direct push rig and sampled using a 2-foot split spoon. Soil samples were field-screened using a photoionization detector (PID) equipped with a 10.6 electron volt (eV) lamp for the presence of volatile organic compounds (VOCs).

Based upon field-screened data and visual characterization, a composite soil sample was collected from a 2-foot interval for laboratory analyses from each soil boring. These samples were collected from the identified urban fill layer.

Asphalt was approximately 4 to 6 inches thick across the Site. In general, soils within the urban fill (upper) layer consisted of darker brown fine to medium sand with little to some gravel. Urban fill was generally observed in the 0 to 10 feet bgs interval, with a maximum depth of 10 feet bgs. In general, natural soils (lower layer) consisted of lighter brown fine to medium sand with trace clay and iron staining throughout. Brick and/or coal/coal ash debris were observed in all three soil borings. A plan of soil boring locations is provided in Figure 2. Refer to Appendix A for accompanying soil boring logs.

Composite soil samples were submitted to Alpha Analytical Laboratories of Westborough, Massachusetts for analysis of the following: semi-volatile organic compounds (SVOCs) by EPA Method 8270, VOCs by EPA Method 5035, MCP 14 metals, polychlorinated biphenyls (PCBs) by EPA Method 8082A, total petroleum hydrocarbons (TPH) by EPA Method 8015, extractable petroleum hydrocarbons (EPH) by method EPH-19-2.1, volatile petroleum hydrocarbons (VPH) by Method VPH-18-2.1, chlorinated pesticides by EPA Method 8081, chlorinated herbicides by EPA Method 815, reactivity, conductivity, pH, and ignitability.

To aid in determining the best waste disposal options for the soil, Loureiro compared the soil analytical results to the MCP Soil Standard Reporting Category (RCS-1), promulgated and published in the Massachusetts Oil and Hazardous Materials List (310 CMR 40.1600); and to the standards set forth in the Massachusetts Department of Environmental Protection (MassDEP) Policy COMM-97-001; for the reuse or disposal of Contaminated Soil at Massachusetts Landfills.

Laboratory analytical results indicated soil constituents primarily consist of EPH, VOCs, SVOCs, metals, TPH, and low concentrations of chlorinated pesticides and PCBs. Lead and tetrachloroethene (PCE) were detected in all three soil samples; low concentrations were detected in HA20-1 and HA20-3 and concentrations above MCP RCS-1 were detected in HA20-2. PCBs Aroclor 1254 and Aroclor 1260 were reported above laboratory detection limits in one of the three samples collected (HA20-2), but below applicable standards. Chlorinated pesticide 4,4'-DDD was detected above laboratory detection limits in boring HA20-2, but below applicable standards. Chlorinated herbicides and VPH were not detected above laboratory reporting limits. Additionally, none of the samples submitted for analysis were ignitable. Refer to Table 1 for a summary of select analytical results. Refer to Attachment B for accompanying laboratory analytical reports.

The sample collected from HA20-2, where PCE was detected at a concentration higher than detected in other areas of the Site and above MCP RSC-1, was reanalyzed to confirm the results. The reanalyzed sample confirmed the presence of PCE at a concentration above MCP RCS-1. Additionally, cis-1,2-dichloroethene (cis-1,2-DCE) was detected in the reanalyzed sample at a concentration above MCP RCS-1.

To further assess the presence of chlorinated VOCs in soil and groundwater across the Site, four additional soil borings, with three finished as groundwater monitoring wells, were installed under the supervision of Loureiro personnel on July 13, 2020. The soil borings were advanced by GeoLogic Earth Exploration, Inc. (GEO) of Norfolk, Massachusetts using a truck-mounted direct push rig. Soil samples were field-screened using a PID equipped with a 10.6 eV lamp for the presence of VOCs. Soil borings were identified as LEA-B1 through LEA-B4 with soil borings LEA-B1 through LEA-B3 finished as monitoring wells and identified as LEA-MW-1 through LEA-MW-3, respectively.

Based upon field-screened data and visual characterizations, a composite soil sample was collected from a 2-foot interval for laboratory analyses from each soil boring. Soil samples were collected at a depth of 4-6 feet bgs at LEA-B1 (fill layer), 12-14 feet bgs at LEA-B2 (native layer), 6-8 feet bgs at LEA-B3 (fill layer) and 4-6 feet bgs at LEA-B4 (fill layer). Soil characteristics observed were similar to those observed during the May 2020 sampling as described above. Refer to Figure 2 for the locations of the soil borings and monitoring wells and to Appendix A for soil boring logs.

Composite soil samples were submitted to Alpha Analytical Laboratories for analysis of the VOCs by EPA Method 5035. No VOCs were detected in LEA-B2 above laboratory reporting limits. Laboratory analytical results detected PCE in the soil samples collected from LEA-B1, LEA-B3 and LEA-B4 at low concentrations, below MCP RCS-1. No other VOCs were detected above laboratory reporting limits in soil sample LEA-B1. Trichloroethene (TCE) and cis-1,2-DCE were detected in LEA-B3 and LEA-B4 at low concentrations, below MCP RCS-1. A tabulated summary of soil sampling results is located in Table 1.

Loureiro returned to the Site on July 21, 2020 to collect groundwater samples from the newly installed monitoring wells. Groundwater samples were collected using a low-flow technique in accordance with Loureiro's Standard Operating Procedure for Low Flow (Low-Stress) Liquid Sample Collection and Field Analysis. Field parameters were obtained at the initiation of purging which included pH, temperature, specific conductance, and turbidity. Purging was performed using a variable speed peristaltic pump with disposable polyethylene tubing, taking care to minimize aeration. A sample was collected from each well and submitted to Absolute Resource Associates of Portsmouth, New Hampshire for VOC analysis by EPA Method 8260.

No VOCs were detected above laboratory reporting limits in groundwater samples collected from LEA-MW-1 and LEA-MW-3. PCE and TCE were detected in the groundwater sample collected from LEA-MW-2 at concentrations of 2 micrograms per liter (ug/L), below the Groundwater Standard Reporting Category (RCGW-1) of 5 ug/L for both constituents. Refer to Table 2 for a summary of groundwater analytical data.

Based on the data collected during limited subsurface investigations, lead, PCE and cis-1,2-DCE were detected in soil at sample location HA20-2 at concentrations above the applicable RCS-1 standard triggering a 120-day notification requirement. In accordance with 310 CMR 40.0315 a release to the environment indicated by the measurement of one or more hazardous materials in soil or groundwater in an amount equal to or greater than the applicable Reportable Concentration was reported to the MassDEP on August 20, 2020 through the submittal of BWSC 103 Release Notification Form (RNF) through MassDEP's eDEP online filing system. On August 25, 2020, RTN 3-36458 was assigned to the release. No additional subsurface investigations/sampling have been conducted since the submittal of the RNF and assignment of RTN 3-36458.

2. DATA USABILITY EVALUATION

A Data Usability Evaluation documents that the data relied upon is scientifically valid and defensible. Loureiro utilized the MassDEP's *MCP Representativeness Evaluations and Data Usability Assessments*, Policy #WSC-07-350, dated September 19, 2007, to determine the data is Compendium Analytical Methods (CAM) Compliant. The data achieved Presumptive Certainty meaning the data reached a sufficient level of precision, accuracy, and sensitivity to support the Permanent Solution.

2.1 Conceptual Site Model

Based on a review of a *Phase I Environmental Site Assessment (ESA) Update* for 2072 Massachusetts Avenue, Cambridge, Massachusetts completed by Atlantic Environmental Sciences, Inc. (AES) dated, March 12, 2018 and the results of the assessment work recently completed by Loureiro, Loureiro developed the following conceptual site model (CSM) to describe the nature and extent of the lead and chlorinated VOCs detected in soil.

Based on information provided in AES's Phase I ESA, historically the Site was utilized for residential and commercial use between 1888 and 1950 and for commercial use since 1996. City Directory listings identified Kentucky Fried Chicken restaurant as located at the Site between 1975 and 1999. Darul Kabab, a Bangladeshi/Indian/Pakistani restaurant and current occupant has been operating at the Site since 2010. There is no historical evidence of use or storage of oil or hazardous materials at the Site and no evidence of occupants (e.g., gas stations, dry cleaners) who might have used such materials.

Currently the Site is surrounded by commercial properties to the north, east and west, as well as residential properties to the south and east. Immediately abutting the property is the North Cambridge Senior Centre and Cambridge Housing Authority to the east, Massachusetts Avenue to the north, Walden Street to the west and a parking lot to the south. Historically, Walden Cleaners was located at 2090 Massachusetts Avenue, approximately 75 feet northwest of the Site from approximately 1971 through 2018. According to AES's Phase I ESA, Walden Cleaners had one

Tetrachloroethylene (PERC) Dry Cleaning machine and during 2016 and 2017 Walden Cleaners purchased 35 gallons of PERC and disposed of 500 gallons of waste PERC. A gas station located at 2055 Massachusetts Avenue, approximately 100 feet northeast of the Site operated from approximately 1950 to 2006 and was associated with two releases resulting in the submission of Class A-2 RAOs. Additionally, based on a review of Sanborn Maps included in AES's Phase I ESA, a filling station was located approximately 50 feet east of the Site in 1935 and was converted into an auto sales business by 1950.

In support of a planned redevelopment of the Site, soil samples were collected from three geotechnical soil borings to perform soil pre-characterization in an effort to expedite soil excavation and offsite management during redevelopment. Analytical results detected lead and PCE in one of the soil samples collected from the fill layer at concentrations above the applicable RCS-1 standard. The sample collected from HA20-2 where PCE was detected at a concentration higher than detected in other areas of the Site and above MCP RSC-1 was reanalyzed to confirm the results. The reanalyzed sample confirmed the presence of PCE at a concentration above MCP RCS-1. Additionally, cis-1,2-DCE was detected in the reanalyzed samples at a concentration above MCP RCS-1.

To further assess the presence of chlorinated VOCs in soil and groundwater across the Site, four additional soil borings with three completed as groundwater monitoring wells were installed. One soil sample was collected from each soil boring, with three samples collected from the fill layer and one sample collected from a native layer located below the fill layer and analyzed for VOCs. No VOCs were detected above laboratory reporting limits in the soil sample collected from the native layer (LEA-B2). Laboratory analytical results detected PCE in the soil samples collected from the fill layer (LEA-B1, LEA-B3 and LEA-B4) at low concentrations, below MCP RCS-1. No other VOCs were detected above laboratory reporting limits in soil sample LEA-B1. TCE and cis-1,2-DCE were detected in LEA-B3 and LEA-B4 at low concentrations, below MCP RCS-1.

To assess groundwater conditions at the Site, groundwater samples were collected from the three newly installed monitoring wells and submitted for laboratory analysis of VOCs. No VOCs were detected above laboratory reporting limits in the groundwater samples collected from monitoring

wells LEA-MW-1 and LEA-MW-3. PCE and TCE were detected in the groundwater sample collected from LEA-MW-2 at concentrations of 2 ug/L, below applicable RCGW-2 standards.

Based on the data collected during the subsurface investigation conducted by Loureiro between May and July 2020, lead, PCE and cis-1,2-DCE were detected in soil collected from soil boring HA20-2 at concentrations above the applicable RCS-1 standard triggering a 120-day notification requirement. Notification of the 120-day notification requirement was conveyed to the MassDEP on August 20, 2020 through the submittal of BWSC 103 RNF via eDEP online filing system. On August 25, 2020, RTN 3-36458 was assigned to the release. No additional subsurface investigations/sampling have been conducted since the submittal of the RNF and assignment of RTN 3-36458.

Based on information collected to date and the Site's historic use as residential and commercial use with no indication of businesses that would have utilized chlorinated VOCs or metals, Loureiro concludes that the chlorinated VOCs and lead detected in on-Site soils is associated with an off-Site source(s) or related to the on-Site fill material. Properties in proximity to the Site that based on historical usages may have utilized chlorinated VOCs include 2090 Massachusetts Avenue (formerly operated as a drycleaner from approximately 1971 to 2018), and 2050 Massachusetts Avenue (operated as a filling station/auto sales from 1935-1950s). The lead detected in the on-Site soils could be associated with the fill material located at the Site or from historical usage of 2050 Massachusetts Avenue as a filling station in 1935.

Based on the assessment conducted to date, HA20-2 was the only location where concentrations of lead and chlorinated VOCs were detected in soils above applicable Method 1 Standards. Low levels of lead and chlorinated VOCs were identified below applicable Method 1 S-1 Standards at additional locations in the fill layer. No chlorinated VOCs were detected above laboratory detection limits in the soil sample collected from the native soil layer at location LEA-B2. No chlorinated VOCs were detected in groundwater above applicable Method 1 GW-2 and GW-3 Standards. Given the low levels of contaminants detected in groundwater, all below Method 1 GW-2 and GW-3 standards, Loureiro considers the release to have impacted soil primarily.

2.2 Use of Field Screening Data for Soil Sampling

During the initial and follow-up Site investigation activities, field screening in the form of visual/olfactory observations were used to identify potentially impacted soil. Loureiro also used a PID to confirm olfactory and visual observations and screen for the presence of VOCs. Soil samples were collected from the intervals where the highest PID readings were detected and/or based on visual/olfactory observations and submitted for laboratory analysis.

2.3 Use of Field Chemistry Parameters for Groundwater Sampling

During the groundwater sampling event, low flow sampling techniques and field chemistry parameters were used to evaluate when water-purging activities from the wells was representative of subsurface conditions and not the annular space around the wells. Field chemistry parameters were stable prior to collecting samples for laboratory VOC analysis in accordance with low-flow sampling requirements and are considered representative of groundwater quality within the Site.

2.4 Sampling Rationale

Loureiro collected several soil and groundwater samples. Soil samples were initially collected from soil borings HA20-1, HA20-2 and HA20-3 to determine soil conditions across the Site for soil pre-characterization associated with a planned redevelopment of the Site that would require soil excavation/offsite disposal. Following the detection of lead, PCE, and cis-1,2-DCE in the soil sample collected from HA20-2 above RCS-1, soil borings LEA-B1 through LEA-B4 were installed in locations not previously assessed to further assess soil conditions throughout the Site. Soil borings LEA-B1 through LEA-B3 were finished as groundwater monitoring wells LEA-MW-1 through LEA-MW-3, respectively. Groundwater samples were collected from the newly installed groundwater monitoring wells to assess groundwater conditions across the Site.

2.5 Number and Spatial Distribution of Samples

The Site consists of approximately 0.2 acres of land with a portion of the Site occupied by an 1,860 square foot building. A total of seven soil borings with three finished as groundwater monitoring wells were installed across the Site, providing good coverage and distribution across the property.

Loureiro collected a total of seven soil samples from soil borings installed across the Site. Three groundwater samples were also collected from three groundwater monitoring wells installed across the Site. All samples were collected utilizing proper procedure and methodology. All samples were collected to determine the extent of the lead and chlorinated VOCs detected above RCS-1 in soil boring HA20-2. The number of soil samples supported by soil screening results was sufficient for the size of the property/release area.

Groundwater samples were collected from recently installed groundwater monitoring wells installed throughout the Site. The locations of the wells were chosen to provide Site-wide coverage and wells were installed proximal to the Site building and to the adjacent residential building to the east with one installed in the presumed downgradient direction.

Loureiro believes that the number and locations of samples are considered appropriate for the purposes of this report, based upon the above information and the analytical sampling results.

2.6 Temporal Distribution of Samples

The temporal distribution of the soil samples is not considered to be a limiting factor with regard to the Site characterization. Based on the availability of data from the soil sampling events temporal distribution is considered adequate for the data quality objectives of the sampling program.

2.7 Completeness

Completeness is a measure of the amount of valid data obtained compared to the amount expected under normal conditions. If the completeness goal is 100%, this means that all samples collected and submitted to the laboratory must be useable in support of the Permanent Solution Statement.

In summary, all data used to support of this Permanent Solution Statement is considered adequately representative of the spatial and temporal data at the Site, and has acceptable accuracy, precision and sensitivity.

2.8 **Inconsistency and Uncertainty**

Inconsistent information and sources of uncertainty that may undermine the Permanent Solution Statement must be identified and discussed as part of the Data Usability Evaluation. No inconsistency or uncertainty was identified between field observations or screening data and the laboratory.

2.9 **Information Considered Unrepresentative**

This section identifies information that was not used to support the Permanent Solution Statement, because it was determined to be unrepresentative or no longer representative of disposal site conditions. Loureiro considers all soil and groundwater analytical data collected during the subsurface investigations implemented at the Site between May and July 2020 representative of Site conditions, scientifically valid and defensible, and of sufficient level of precision, accuracy, and completeness to support this Permanent Solution Statement.

3. NATURE AND EXTENT OF OIL AND HAZARDOUS MATERIALS

3.1 Nature of the Release

Based on information collected to date and the Site's historic use as residential and commercial use with no indication of businesses that would have utilized chlorinated VOCs or metals, Loureiro concludes that the chlorinated VOCs and lead detected in on-Site soils is associated with an off-Site source(s) or related to the on-Site fill material. Properties in proximity to the Site that based on historical usages may have utilized chlorinated VOCs include 2090 Massachusetts Avenue (formerly operated as a drycleaner from approximately 1971 to 2018), and 2050 Massachusetts Avenue (operated as a filling station/auto sales from 1935-1950s). The lead detected in the on-Site soils could be associated with the fill material located at the Site or from historical usage of 2050 Massachusetts Avenue as a filling station in 1935.

The impact to on-Site soils was identified in May 2020 during subsurface investigations conducted to pre-characterize soils prior to redevelopment of the Site. Based on additional soil and groundwater assessment conducted to determine nature and extent of the identified release condition, no Method 1 GW-2 or GW-3 Standards were exceeded and HA20-2 was the only location where concentrations of lead and cis-1,2-DCE in soil were detected above Method 1 S-1/GW-2 Standards. Loureiro presumes, based on the information collected during the investigations, that the elevated chlorinated VOC and lead contamination is limited to soils in the area of the Site proximal to HA20-2. Based on data collected we consider the release to have primarily impacted soil.

3.2 Extent of Soil Impacts

The impact to on-Site soils was identified during soil pre-characterization activities conducted in May 2020 during the installation/sampling of three soil borings. To assess nature and extent, four additional soil borings were installed across the Site and soil samples collected. Throughout the investigations, Loureiro collected a total of seven soil samples throughout the Site. Based on a review of the soil data collected, impacts to on-Site soil above applicable Method 1 Standards are

limited to the area proximal to soil boring HA20-2. The locations of the soil samples are presented on Figure 2 attached, and soil analyses are summarized on Table 1.

3.3 **Extent of Groundwater Impacts**

Loureiro collected a total of three groundwater samples for VOC analysis during the investigation, from newly installed groundwater monitoring wells LEA-1 through LEA-3. No VOCs were detected in any of the groundwater monitoring wells at concentrations above the applicable GW-2 and GW-3 standards. Based on the sampling results, groundwater has not been significantly impacted by the release. The locations of the groundwater monitoring wells are presented on Figure 2 attached and groundwater analyses are summarized on Table 2.

3.4 **Disposal Site Boundary**

The disposal site conservatively consists of the entire parcel property located at 2072 Massachusetts Avenue.

4. RISK CHARACTERIZATION

Loureiro completed a Method 1 Risk Characterization (RC) at the Site to determine if Site conditions represent a condition of No Significant Risk (NSR). The Method 1 RC was used to characterize the risk of harm to health, public welfare and the environment at the Site, where assessment activities determined that the presence of contamination is limited to soil and groundwater. The following risk characterization evaluated soil and groundwater. The Method 1 RC was completed in accordance with 310 CMR 40.0970 and a separate characterization of the risk to public safety was completed in accordance with 310 CMR 40.0960.

4.1 Data Used in the Risk Characterization

The objective of the Method 1 RC was to determine if concentrations of OHM at the Site represent a Condition of No Significant Risk under current and foreseeable future Site Conditions based on a foreseeable residential use of the Site.

The analytical data representative of current conditions for the Site was evaluated for use in the Method 1 RC. The soil and groundwater samples were collected throughout the Site and in the immediate area of where exceedences of applicable standards were identified. All data collected between May and July 2020 were determined to be representative of current conditions and utilized in the Method 1 RC.

4.2 Risk to Human Health

4.2.1 Current and Reasonably Foreseeable Use and Groundwater and Soil Categories

The Site is currently occupied by a restaurant; however, the Site is slated to be redeveloped into a multi-family residential property. For the purpose of the RC Loureiro assumed that future foreseeable uses could include multi-family residential at the Site. Under current and future foreseeable conditions, potential receptors at the Site would include, employees that work at the Site, future on-Site residents including children, off-Site residents that live near-by, visitors, trespassers, utility workers and construction workers. Potential future on-Site children residing at the Site would be the most sensitive receptors, therefore, risks calculated for a potential future on-Site child resident were considered protective of potential risks to the other current and future

foreseeable receptors. The RC assumed children and adult's frequency and intensity of use of the area is high and that there would be no on-Site restricted uses or activities.

There are no surface water features located within 500 feet of the Site. There are no designated Potentially Productive Aquifers, Zone II Areas, Sole Source Aquifers, Public Water Supply wells, Interim Wellhead Protection Areas, and/or Zone A surface water supply areas located within 1/2-mile of the Site. Additionally, no wetland, certified vernal pools, fish habitats or threatened/endangered species habitats or protected open spaces are located within 500 feet of the Site.

Per 310 CMR 40.0932 Loureiro determined that the applicable groundwater categories at the Site for current and reasonably foreseeable Site Activities and Uses are Method 1 GW-2 and GW-3.

The Site is not located within a current drinking water source area or within a potential drinking water source area and therefore category GW-1 is not applicable to the Site. The average annual depth to groundwater at the Site is less than 15 feet and located within 30 feet of an existing building, therefore, category GW-2 is applicable to the Site. Groundwater is considered a potential source of discharge to surface water at all Sites and therefore category GW-3 is applicable to the Site.

Per 310 CMR 40.0933 it was determined that soil categories applicable to the Site for current and reasonably foreseeable Site Activities and Uses are S-1, S-2 and S-3. As S-1 is the soil category associated with the highest exposure potential in comparison to S-2 and S-3, it was selected as the applicable soil category for the RC.

4.2.2 Hazard Identification

4.2.2.1 Identification of Constituents of Concern

During initial subsurface investigations conducted in May 2020 to pre-characterize soil prior to redevelopment of the Site, soil samples were analyzed for a wide array of parameters to determine appropriate handling/disposal including, SVOCs, VOCs, metals PCBs, TPH, EPH, VPH, and chlorinated pesticides and herbicides. During this initial investigation lead and PCE were detected

at concentrations above applicable RCS-1 standards. Follow up investigations focused on chlorinated VOCs.

As a conservative approach, all constituents detected above laboratory detection limits were considered Constituents of Concern (COCs). The following COCs were identified for soil: C₁₉-C₃₆ aliphatics, C₁₁-C₂₂ aromatics, naphthalene, acenaphthene, fluorene, phenanthrene, anthracene, fluoranthene, pyrene, benzo(a)anthracene, benzo(a)pyrene, chrysene, benzo(b)fluoranthene, benzo(k)fluoranthene, benzo(a)pyrene, indeno(1,2,3-cd)pyrene, benzo(ghi)perylene, dibenzo(a,h)anthracene, 2-mehylnaphthalene, 4,4'-DDD, 4,4'-DDT, chlordane, aroclor 1254, aroclor 1260, total PCBs, arsenic, barium, beryllium, chromium, lead, mercury, nickel, vanadium, zinc, PCE, TCE, cis-1,2-DCE, and TPH. The following COCs were identified for groundwater: PCE and TCE.

4.2.2.2 Identification of Suitably Analogous Standards

Applicable or suitably analogous standards are formally promulgated standards intended to protect human health and the environment from adverse effects of hazardous agents. Such standards are medium-specific. In accordance with MassDEP policy, MCP Method 1 Risk Characterization standards were utilized in the Method 1 RC conducted for the Site. As described above, the Method 1 S-1 soil category and the Method 1 GW-2 groundwater categories were selected as the applicable soil and groundwater categories for the RC.

Federal and state drinking water standards (such as Massachusetts Maximum Contaminant Levels [MMCLs]) are applicable or suitably analogous enforceable standards for sites classified as GW-1. Drinking water guidelines (e.g., MassDEP Office of Research and Standards Drinking Water Guidelines [ORSGL]) are not enforceable standards. The drinking water standards are applicable to a site, if the site groundwater is categorized as GW-1. The GW-1 category is not applicable to Site groundwater. Therefore, drinking water standards are not applicable to the subject Site. Massachusetts Surface Water Quality Standards are applicable or suitably analogous standards to a site, if surface water is present and potentially impacted by a site. The potential for impact to surface water related to the Site has not been identified. Therefore, surface water quality standards are not applicable to the Site.

4.2.3 Exposure Assessment and Calculation of Exposure Point Concentrations

The objectives of the Exposure Assessment are to qualitatively and quantitatively describe the settings and conditions under which human exposures to Site OHM may reasonably be expected to occur. Achieving these goals entails the identification of receptors that may be on-Site, evaluation of exposure pathways, and the calculation of Exposure Point Concentrations (EPCs) to which receptors may be exposed.

Exposure profiles provide a narrative description of how exposures may occur at the Site. The profiles identify factors related to potential exposures and estimate their magnitude. These factors include variables such as the receptors' body weights, intake rates, frequency of exposure, and duration of exposure. Exposure profiles are provided for each receptor identified under current and reasonably foreseeable future uses of the Site.

The Site is currently used as a restaurant, however it is slated for redevelopment for multi-family residential purposes and therefore there is no presumed restriction on exposure currently or in the future. Loureiro presumes that construction activity will also occur. Therefore, Loureiro presumes the residential and construction exposure scenarios are appropriately representative and protective. Exposure to soil and groundwater were evaluated.

Exposure points represent the locations where human or ecological receptors may come into contact with OHM at a site. These locations may be either single discrete points or areas/zones of affected media. Within the Method 1 RC the entire Site was considered representative of exposure points for soil and for groundwater, each individual groundwater sampling point was considered its own exposure point. No hot spots were identified at the Site. Potential human receptors were identified based on the current and reasonably foreseeable future use of the Site. As described above, the RC assumed children and adults' frequency and intensity of use of the area is high and that there would be no on-Site restricted uses or activities.

The exposure routes describe how a receptor may contact contaminants. The exposure routes identified for analysis in this Method 1 RC are ingestion of soil and dermal adsorption of constituents from soil and groundwater in contact with the skin and inhalation of soil particles by future children and adults residing at the Site and construction workers.

Exposure factors are numerical estimates of the magnitude and duration of exposures that a receptor may have to COCs. The EPCs were determined as follows. For each contaminant detected in soil samples collected across the Site, the arithmetic mean was calculated to determine the EPC for each contaminant of concern. As a conservative approach, if a contaminant was not detected above the laboratory detection limit (LDL), one-half the LDL was used as the concentration in the calculation. As a conservative approach, the Site groundwater EPCs were considered the highest concentration of each contaminant detected at any groundwater sampling point. Refer to Tables 1 and 2 for EPCs calculated for Site soils and groundwater, respectively.

4.2.4 Comparison of Exposure Point Concentrations to MCP Method 1 Standards

The EPCs calculated for Site soils and groundwater were then compared to the applicable promulgated MCP Method 1 Standards. As discussed above, the most conservative soil and groundwater standards determined to be applicable to the Site were S-1 and GW-2 and GW-3, respectively. As shown in Table 1 all soil EPCs were below the applicable S-1/GW-2 and S-1/GW-3 standard. As shown in Table 2 all groundwater EPCs were below the applicable Method 1 GW-2 and GW-3 standards.

No EPCs were greater than the applicable Method 1 Soil and Groundwater Standards. The Method 1 RC conducted for the Site soils and groundwater demonstrated that a condition of no significant risk of harm to health, public welfare and the environment exists.

4.3 Risk to Safety

The risk of harm to safety, as described in 310 CMR 40.0960, was evaluated for the Site. The following observations concerning the Site apply to release-related conditions at the Site and the relevant criteria set forth in Section 40.0960 of the MCP:

1. There are no rusted or corroded drums or containers, open pits, lagoons, or other dangerous structures at the Site;
2. There is no threat of fire or explosion from the presence of explosive vapors resulting from a release of OHM at the Site; and

3. There are no uncontained materials at the Site exhibiting the characteristics of corrosivity, reactivity, or flammability as described at 310 CMR 40.0347.

Therefore, there is not a risk of harm to safety due to release-related conditions at the Site.

5. PUBLIC INVOLVEMENT

Pursuant to the Public Involvement Requirements for Permanent Solution Statements as described in 310 CMR 40.1403 and 310 CMR 40.1406, the Chief Municipal Officer and Board of Health have been notified of the availability of this submittal. Refer to Appendix C for a copy of the notifications.

6. PERMANENT SOLUTION WITHOUT CONDITIONS

Based on subsurface investigations conducted at the Site and the completion of a Method 1 RC it has been determined that the release meets a Permanent Solution with No Conditions Statement condition per the MCP. It was determined that there is no on-Site source, no plumes of contaminants, and that a condition of no significant risk of harm to health, public welfare and the environment exists. A risk characterization was performed to quantify the risk to public health, safety welfare and the environment and demonstrates that a condition of No Significant Risk is present for current and foreseeable future use. Loureiro presumed no restrictions on future use to demonstrate this condition of no significant risk. Therefore, a Permanent Solution with No Conditions as per the MCP exists. In addition, it does not depend on ongoing maintenance, operations, or monitoring. Finally, this Permanent Solution with No Conditions Report addresses the extent of the release and is not dependent on any other Response Action Outcome (RAO)/Permanent Solutions.

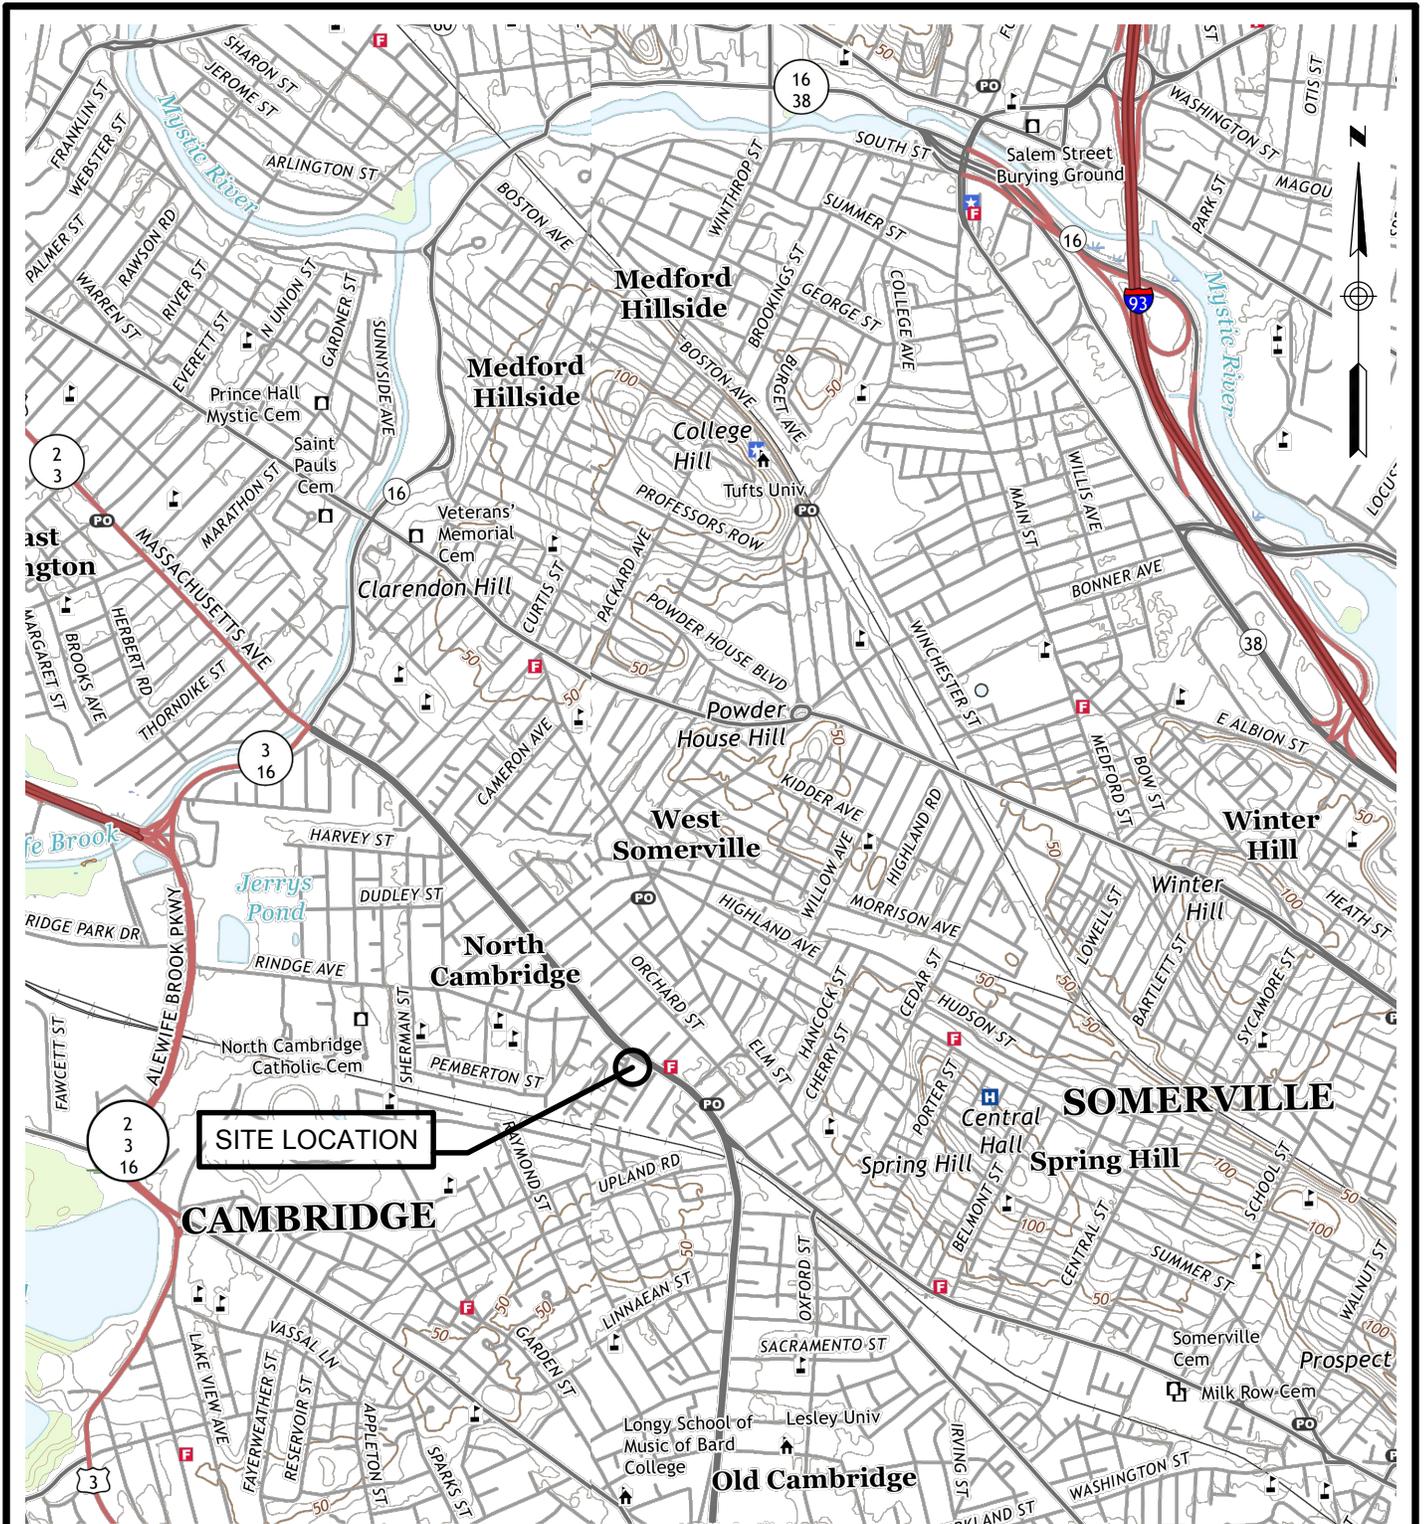

7. LICENSED SITE PROFESSIONAL (LSP) OPINION

A Permanent Solution With no Conditions Form (BWSC-104) was submitted through MassDEP's eDEP online filing system simultaneously with the uploading of this report to eDEP. The form provides the signature and seal of the Massachusetts Licensed Site Professional (LSP) of record for this release, Samuel Butcher (LSP # 9185). The Permanent Solution Without Conditions Report certifies that, in the LSP's opinion, a condition of "No Significant Risk" to human health, public welfare, and the environment now exists at the release location under RTN 3-36458. Loureiro performed response actions in accordance with the MCP. As a result, no public safety or imminent hazard condition exists at the release location. Therefore, a condition of No Significant Risk exists at the Site and a Permanent Solution Without Conditions is appropriate for the release.

8. FEASIBILITY OF ACHIEVING BACKGROUND

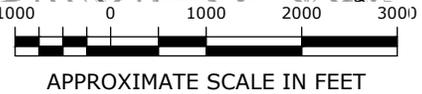

Since the activities completed under this assessment did not reduce contamination to prerelease conditions and as documented herein Loureiro presumes lead and chlorinated VOC contamination remains across the Site. Removal of effected soil would require significant excavation and would likely require engineering support or partial demolition and reconstruction of the existing building. Alternative remedial strategies, including in-situ treatments would be time-consuming and expensive. Loureiro understands from conversations with the property-owner that in the near future the Site will be redeveloped. At that time, some soil excavation activities will be conducted and will reduce contamination in the areas excavated, with soil being handled/disposed of in accordance with 310 CMR 40.0030.

GW-3-14: MCP 2014 Method 1 GW-3 Groundwater Standards Criteria effective June 20, 2014.

U-Undetected at Laboratory Detection Limit

NA- Not Analyzed

EPC - For each monitoring well location the concentration detected was conservatively used as the EPC. If contaminant were not detected above the laboratory reporting limit, the laboratory reporting limit was used for the EPC.

Analytical Laboratory Reports

Laboratory Report

Absolute Resource *associates*

124 Heritage Avenue Portsmouth NH 03801

Lauren McKinlay
Loureiro Engineering Associates, Inc.
779 South Main Street
Manchester, NH 03102-5143

PO Number: None
Job ID: 53979
Date Received: 7/28/20

Project: CC HRE 2072 Mass Ave. 13MA0.01

Attached please find results for the analysis of the samples received on the date referenced above.

Unless otherwise noted in the attached report, the analyses performed met the requirements of Absolute Resource Associates' Quality Assurance Plan. The Standard Operating Procedures are based upon USEPA SW-846, USEPA Methods for Chemical Analysis of Water and Wastewater, Standard Methods for the Examination of Water and Wastewater and other recognized methodologies. The results contained in this report pertain only to the samples as indicated on the chain of custody.

Absolute Resource Associates maintains certification with the agencies listed below. The reported results apply to the sample(s) in the condition as received at the time the laboratory took custody. This report shall not be reproduced except in full and with approval from the laboratory. The liability of ARA is limited to the cost of the requested analyses, unless otherwise agreed upon in writing.

We appreciate the opportunity to provide laboratory services. If you have any questions regarding the enclosed report, please contact the laboratory and we will be glad to assist you.

Sincerely,
Absolute Resource Associates

MassDEP Analytical Protocol Certification Form

Laboratory Name: Absolute Resource Associates

Project #: 13MA0.01

Project Location: Massachusetts

RTN:

This Form provides certifications for the following data set: list Laboratory Sample ID Number(s): 53979

Matrices: Groundwater/Surface Water Soil/Sediment Drinking Water Air Other:

CAM Protocol (check all that apply below):

8260 VOC CAM II A <input checked="" type="checkbox"/>	7470/7471 Hg CAM III B <input type="checkbox"/>	MassDEP VPH (GC/PID/FID) CAM IV A <input type="checkbox"/>	8082 PCB CAM V A <input type="checkbox"/>	9014 Total Cyanide/PAC CAM VI A <input type="checkbox"/>	6860 Perchlorate CAM VIII B <input type="checkbox"/>
8270 SVOC CAM II B <input type="checkbox"/>	7010 Metals CAM III C <input type="checkbox"/>	MassDEP VPH (GC/MS) CAM IV C <input type="checkbox"/>	8081 Pesticides CAM V B <input type="checkbox"/>	7196 Hex Cr CAM VI B <input type="checkbox"/>	MassDEP APH CAM IX A <input type="checkbox"/>
6010 Metals CAM III A <input type="checkbox"/>	6020 Metals CAM III D <input type="checkbox"/>	MassDEP EPH CAM IV B <input type="checkbox"/>	8151 Herbicides CAM V C <input type="checkbox"/>	8330 Explosives CAM VIII A <input type="checkbox"/>	TO-15 VOC CAM IX B <input type="checkbox"/>

Affirmative Responses to Questions A through F are required for "Presumptive Certainty" status

A	Were all samples received in a condition consistent with those described on the Chain-of-Custody, properly preserved (including temperature) in the field or laboratory, and prepared/analyzed within method holding times?	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No
B	Were the analytical method(s) and all associated QC requirements specified in the selected CAM protocol(s) followed?	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No
C	Were all required corrective actions and analytical response actions specified in the selected CAM protocol(s) implemented for all identified performance standard non-conformances?	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No
D	Does the laboratory report comply with all the reporting requirements specified in CAM VII A, "Quality Assurance and Quality Control Guidelines for the Acquisition and Reporting of Analytical Data"?	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No
E	VPH, EPH, APH, and TO-15 only a. VPH, EPH, and APH Methods only: Was each method conducted without significant modification(s)? (Refer to the individual method(s) for a list of significant modifications). b. APH and TO-15 Methods only: Was the complete analyte list reported for each method?	<input type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> Yes <input type="checkbox"/> No
F	Were all applicable CAM protocol QC and performance standard non-conformances identified and evaluated in a laboratory narrative (including all "No" responses to Questions A through E)?	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No

Responses to Questions G, H and I below are required for "Presumptive Certainty" status

G	Were the reporting limits at or below all CAM reporting limits specified in the selected CAM protocol(s)?	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No ¹
----------	---	--

Data User Note: Data that achieve "Presumptive Certainty" status may not necessarily meet the data usability and representativeness requirements described in 310 CMR 40. 1056 (2)(k) and WSC-07-350.

H	Were all QC performance standards specified in the CAM protocol(s) achieved?	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No ¹
I	Were results reported for the complete analyte list specified in the selected CAM protocol(s)?	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No ¹

¹All negative responses must be addressed in an attached laboratory narrative.

I, the undersigned, attest under the pains and penalties of perjury that, based upon my personal inquiry of those responsible for obtaining the information, the material contained in this analytical report is, to the best of my knowledge and belief, is accurate and complete.

Case Narrative

Lab # 53979

Sample Receiving and Chain of Custody Discrepancies

Samples were received in acceptable condition, between 0 and 6 degrees C, on ice, and in accordance with sample handling, preservation and integrity guidelines.

Calibration

VOC: See the included table for a list of compounds quantitated by quadratic equation.

Method Blank

No exceptions noted.

Surrogate Recoveries

No exceptions noted.

Laboratory Control Sample Results

No exceptions noted.

Matrix Spike/Matrix Spike Duplicate/Duplicate Results

Not requested for this project.

Other

No other exceptions noted.

MassDEP Analytical Protocol Certification Form Questions A through I

No explanation is needed for Questions A through I answered in the affirmative.

Quantitation by Quadratic Equation
Lab # 53979

VOC: Quantitation of the following compounds was based on a quadratic equation:

Bromomethane

Acetone

Bromoform

naphthalene

GLOSSARY

%R	Percent Recovery
BLK	Blank (Method Blank, Preparation Blank)
CCB	Continuing Calibration Blank
CCV	Continuing Calibration Verification
CRM	Certified Reference Material (associated with solid Metals samples)
CRMD	Certified Reference Material Duplicate (associated with solid Metals samples)
Dil'n	Dilution
DL	Detection Limit
DUP	Duplicate
LCS	Laboratory Control Sample
LCSD	Laboratory Control Sample Duplicate
LOD	Limit of Detection
LOQ	Limit of Quantitation
MB	Methanol Blank (associated with solid VOC samples)
MLCS	Methanol Laboratory Control Sample (associated with solid VOC samples)
MLCSD	Methanol Laboratory Control Sample Duplicate (associated with solid VOC samples)
MS	Matrix Spike
MSD	Matrix Spike Duplicate
PB	Preparation Blank
QC	Quality Control
RL	Reporting Limit
RPD	Relative Percent Difference
SUR	Surrogate

MADEP MCP Response Action Analytical Report Certification

This form provides certifications for all samples performed by MCP methods. Please refer to the Sample Results and Container Information sections of this report for specification of MCP methods used for each analysis. The following questions pertain only to MCP Analytical Methods.

An affirmative response to questions A through F is required for "Presumptive Certainty" status		
A	Were all samples received in a condition consistent with those described on the Chain-of-Custody, properly preserved (including temperature) in the field or laboratory, and prepared/analyzed within method holding times?	YES
B	Were the analytical method(s) and all associated QC requirements specified in the selected CAM protocol(s) followed?	YES
C	Were all required corrective actions and analytical response actions specified in the selected CAM protocol(s) implemented for all identified performance standard non-conformances?	YES
D	Does the laboratory report comply with all the reporting requirements specified in CAM VII A, "Quality Assurance and Quality Control Guidelines for the Acquisition and Reporting of Analytical Data?"	YES
E a.	VPH, EPH, and APH Methods only: Was each method conducted without significant modification(s)? (Refer to the individual method(s) for a list of significant modifications).	YES
E b.	APH and TO-15 Methods only: Was the complete analyte list reported for each method?	N/A
F	Were all applicable CAM protocol QC and performance standard non-conformances identified and evaluated in a laboratory narrative (including all "No" responses to Questions A through E)?	YES
A response to questions G, H and I is required for "Presumptive Certainty" status		
G	Were the reporting limits at or below all CAM reporting limits specified in the selected CAM protocol(s)?	NO
H	Were all QC performance standards specified in the CAM protocol(s) achieved?	NO
I	Were results reported for the complete analyte list specified in the selected CAM protocol(s)?	YES
For any questions answered "No", please refer to the case narrative section on the following page(s).		

Please note that sample matrix information is located in the Sample Results section of this report.

Project Name: CC HRE 2072 MASS AVE
Project Number: 13MA0.01

Lab Number: L2019321
Report Date: 05/18/20

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Project Name: CC HRE 2072 MASS AVE
Project Number: 13MA0.01

Lab Number: L2019321
Report Date: 05/18/20

Case Narrative (continued)

MCP Related Narratives

Sample Receipt

In reference to question H:

A Matrix Spike was not submitted for the analysis of Total Metals.

Volatile Organics

The initial calibration, associated with L2019321-02, utilized a quadratic fit for acetone.

In reference to question G:

L2019321-01: One or more of the target analytes did not achieve the requested CAM reporting limits.

In reference to question H:

The initial calibration, associated with L2019321-02, did not meet the method required minimum response factor on the lowest calibration standard for 4-methyl-2-pentanone (0.0647) and 1,4-dioxane (0.0014), as well as the average response factor for 4-methyl-2-pentanone and 1,4-dioxane. In addition, the initial calibration verification is outside acceptance criteria for dichlorodifluoromethane (43%).

The initial calibration, associated with L2019321-01 and -03, did not meet the method required minimum response factor on the lowest calibration standard for 2-butanone (0.0753) and 4-methyl-2-pentanone (0.0725), as well as the average response factor for 2-butanone and 4-methyl-2-pentanone. In addition, the initial calibration verification is outside acceptance criteria for dichlorodifluoromethane (155%).

The continuing calibration standards, associated with L2019321-01, -02, and -03, are outside the acceptance criteria for several compounds; however, they are within overall method allowances. A copy of the continuing calibration standards is included as an addendum to this report.

Pesticides

In reference to question G:

L2019321-02 and -03: The sample has elevated detection limits due to the dilution required by the sample matrix. One or more of the target analytes did not achieve the requested CAM reporting limits.

Project Name: CC HRE 2072 MASS AVE
Project Number: 13MA0.01

Lab Number: L2019321
Report Date: 05/18/20

Case Narrative (continued)

Total Metals

In reference to question H:

The WG1369846-2/-3 LCS/LCSD RPD, associated with L2019321-01 through -03, is above the acceptance criteria for mercury (32%).

Non-MCP Related Narratives

Petroleum Hydrocarbon Quantitation

L2019321-01, -02, and -03: The sample has an elevated detection limit due to the dilution required by the sample matrix.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

Report Date: 05/18/20

SAMPLE RESULTS

Lab ID: L2019321-03
 Client ID: HAZO-3
 Sample Location: CAMBRIDGE,MA

Date Collected: 05/11/20 08:50
 Date Received: 05/11/20
 Field Prep: Not Specified

Sample Depth:
 Matrix: Soil
 Analytical Method: 131, VPH-18-2.1
 Analytical Date: 05/13/20 12:43
 Analyst: BAD
 Percent Solids: 90%

Trap: EST, Carbo-pack B/Carboxen 1000&1001

Analytical Column: Restek, RTX-502.2,
 105m, 0.53ID, 3um

Quality Control Information

Condition of sample received: Satisfactory
 Sample Temperature upon receipt: Received on Ice
 Were samples received in methanol? Covering the Soil
 Methanol ratio: 1:1.6

Project Number: 13MA0.01

Lab Number: L2019321
Report Date: 05/18/20

GLOSSARY

Acronyms

DL	- Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EMPC	- Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LOD	- Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
LOQ	- Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.) Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NDPA/DPA	- N-Nitrosodiphenylamine/Diphenylamine.
NI	- Not Ignitable.
NP	- Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.
STLP	- Semi-dynamic Tank Leaching Procedure per EPA Method 1315.
TEF	- Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.
TEQ	- Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.
TIC	- Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Footnotes

Report Format: Data Usability Report

Project Name: CC HRE 2072 MASS AVE
Project Number: 13MA0.01

Lab Number: L2019321
Report Date: 05/18/20

- 1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Difference: With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

PAH Total: With respect to Alkylated PAH analyses, the 'PAHs, Total' result is defined as the summation of results for all or a subset of the following compounds: Naphthalene, C1-C4 Naphthalenes, 2-Methylnaphthalene, 1-Methylnaphthalene, Biphenyl, Acenaphthylene, Acenaphthene, Fluorene, C1-C3 Fluorenes, Phenanthrene, C1-C4 Phenanthrenes/Anthracenes, Anthracene, Fluoranthene, Pyrene, C1-C4 Fluoranthenes/Pyrenes, Benz(a)anthracene, Chrysene, C1-C4 Chrysenes, Benzo(b)fluoranthene, Benzo(j)+(k)fluoranthene, Benzo(e)pyrene, Benzo(a)pyrene, Perylene, Indeno(1,2,3-cd)pyrene, Dibenz(ah)+(ac)anthracene, Benzo(g,h,i)perylene. If a 'Total' result is requested, the results of its individual components will also be reported.

PFAS Total: With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. If a 'Total' result is requested, the results of its individual components will also be reported.

The target compound Chlordane (CAS No. 57-74-9) is reported for GC ECD analyses. Per EPA, this compound "refers to a mixture of chlordane isomers, other chlorinated hydrocarbons and numerous other components." (Reference: USEPA Toxicological Review of Chlordane, In Support of Summary Information on the Integrated Risk Information System (IRIS), December 1997.)

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

- A** - Spectra identified as "Aldol Condensates" are byproducts of the extraction/concentration procedures when acetone is introduced in the process.
- B** - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).
- C** - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.
- D** - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.
- E** - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.
- G** - The concentration may be biased high due to matrix interferences (i.e. co-elution) with non-target compound(s). The result should be considered estimated.
- H** - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.
- I** - The lower value for the two columns has been reported due to obvious interference.
- J** - Estimated value. This represents an estimated concentration for Tentatively Identified Compounds (TICs).
- M** - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.
- ND** - Not detected at the reporting limit (RL) for the sample.
- NJ** - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.
- P** - The RPD between the results for the two columns exceeds the method-specified criteria.
- Q** - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less

Data Qualifiers

than 5x the RL. (Metals only.)

- R** - Analytical results are from sample re-analysis.
- RE** - Analytical results are from sample re-extraction.
- S** - Analytical results are from modified screening analysis.

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility

EPA 624/624.1: m/p-xylene, o-xylene, Naphthalene

EPA 8260C: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.

EPA 8270D: NPW: Dimethylnaphthalene, 1,4-Diphenylhydrazine; SCM: Dimethylnaphthalene, 1,4-Diphenylhydrazine.

SM4500: NPW: Amenable Cyanide; SCM: Total Phosphorus, TKN, NO₂, NO₃.

Mansfield Facility

SM 2540D: TSS

EPA 8082A: NPW: PCB: 1, 5, 31, 87, 101, 110, 141, 151, 153, 180, 183, 187.

EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.

EPA TO-12 Non-methane organics

EPA 3C Fixed gases

Biological Tissue Matrix: EPA 3050B

The following analytes are included in our Massachusetts DEP Scope of Accreditation

Westborough Facility:

Drinking Water

EPA 300.0: Chloride, Nitrate-N, Fluoride, Sulfate; **EPA 353.2:** Nitrate-N, Nitrite-N; **SM4500NO3-F:** Nitrate-N, Nitrite-N; **SM4500F-C, SM4500CN-CE,**

EPA 180.1, SM2130B, SM4500CI-D, SM2320B, SM2540C, SM4500H-B, SM4500NO2-B

EPA 332: Perchlorate; **EPA 524.2:** THMs and VOCs; **EPA 504.1:** EDB, DBCP.

Microbiology: **SM9215B; SM9223-P/A, SM9223B-Colilert-QT, SM9222D.**

Non-Potable Water

SM4500H,B, EPA 120.1, SM2510B, SM2540C, SM2320B, SM4500CL-E, SM4500F-BC, SM4500NH3-BH: Ammonia-N and Kjeldahl-N, **EPA 350.1:** Ammonia-N, **LACHAT 10-107-06-1-B:** Ammonia-N, **EPA 351.1, SM4500NO3-F, EPA 353.2:** Nitrate-N, **SM4500P-E, SM4500P-B, E, SM4500SO4-E, SM5220D, EPA 410.4, SM5210B, SM5310C, SM4500CL-D, EPA 1664, EPA 420.1, SM4500-CN-CE, SM2540D, EPA 300:** Chloride, Sulfate, Nitrate.

EPA 624.1: Volatile Halocarbons & Aromatics,

EPA 608.3: Chlordane, Toxaphene, Aldrin, alpha-BHC, beta-BHC, gamma-BHC, delta-BHC, Dieldrin, DDD, DDE, DDT, Endosulfan I, Endosulfan II, Endosulfan sulfate, Endrin, Endrin Aldehyde, Heptachlor, Heptachlor Epoxide, PCBs

EPA 625.1: SVOC (Acid/Base/Neutral Extractables), **EPA 600/4-81-045:** PCB-Oil.

Microbiology: **SM9223B-Colilert-QT; Enterolert-QT, SM9221E, EPA 1600, EPA 1603.**

Mansfield Facility:

Drinking Water

EPA 200.7: Al, Ba, Cd, Cr, Cu, Fe, Mn, Ni, Na, Ag, Ca, Zn. **EPA 200.8:** Al, Sb, As, Ba, Be, Cd, Cr, Cu, Pb, Mn, Ni, Se, Ag, TL, Zn. **EPA 245.1** Hg.

EPA 522.

Non-Potable Water

EPA 200.7: Al, Sb, As, Be, Cd, Ca, Cr, Co, Cu, Fe, Pb, Mg, Mn, Mo, Ni, K, Se, Ag, Na, Sr, TL, Ti, V, Zn.

EPA 200.8: Al, Sb, As, Be, Cd, Cr, Cu, Fe, Pb, Mn, Ni, K, Se, Ag, Na, TL, Zn.

EPA 245.1 Hg.

MADEP MCP Response Action Analytical Report Certification

This form provides certifications for all samples performed by MCP methods. Please refer to the Sample Results and Container Information sections of this report for specification of MCP methods used for each analysis. The following questions pertain only to MCP Analytical Methods.

An affirmative response to questions A through F is required for "Presumptive Certainty" status		
A	Were all samples received in a condition consistent with those described on the Chain-of-Custody, properly preserved (including temperature) in the field or laboratory, and prepared/analyzed within method holding times?	YES
B	Were the analytical method(s) and all associated QC requirements specified in the selected CAM protocol(s) followed?	YES
C	Were all required corrective actions and analytical response actions specified in the selected CAM protocol(s) implemented for all identified performance standard non-conformances?	YES
D	Does the laboratory report comply with all the reporting requirements specified in CAM VII A, "Quality Assurance and Quality Control Guidelines for the Acquisition and Reporting of Analytical Data?"	YES
E a.	VPH, EPH, and APH Methods only: Was each method conducted without significant modification(s)? (Refer to the individual method(s) for a list of significant modifications).	N/A
E b.	APH and TO-15 Methods only: Was the complete analyte list reported for each method?	N/A
F	Were all applicable CAM protocol QC and performance standard non-conformances identified and evaluated in a laboratory narrative (including all "No" responses to Questions A through E)?	YES
A response to questions G, H and I is required for "Presumptive Certainty" status		
G	Were the reporting limits at or below all CAM reporting limits specified in the selected CAM protocol(s)?	NO
H	Were all QC performance standards specified in the CAM protocol(s) achieved?	NO
I	Were results reported for the complete analyte list specified in the selected CAM protocol(s)?	YES
For any questions answered "No", please refer to the case narrative section on the following page(s).		

Please note that sample matrix information is located in the Sample Results section of this report.

Project Name: CC HRE 2072 MASS AVE
Project Number: 13MA0.01

Lab Number: L2021888
Report Date: 06/01/20

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Report Date: 06/01/20

Case Narrative (continued)

MCP Related Narratives

Volatile Organics

In reference to question G:

L2021888-01: One or more of the target analytes did not achieve the requested CAM reporting limits.

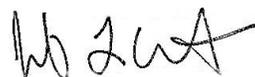

In reference to question H:

The initial calibration, associated with L2021888-01, did not meet the method required minimum response factor on the lowest calibration standard for 2-butanone (0.0596) and tetrahydrofuran (0.0472), as well as the average response factor for 2-butanone. In addition, the initial calibration verification is outside acceptance criteria for chloromethane (132%) and dichlorodifluoromethane (159%).

The continuing calibration standard, associated with L2021888-01, is outside the acceptance criteria for several compounds; however, it is within overall method allowances. A copy of the continuing calibration standard is included as an addendum to this report.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

GLOSSARY

Acronyms

DL	- Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EMPC	- Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LOD	- Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
LOQ	- Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.) Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NDPA/DPA	- N-Nitrosodiphenylamine/Diphenylamine.
NI	- Not Ignitable.
NP	- Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.
STLP	- Semi-dynamic Tank Leaching Procedure per EPA Method 1315.
TEF	- Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.
TEQ	- Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.
TIC	- Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Footnotes

Report Format: Data Usability Report

Project Name: CC HRE 2072 MASS AVE
Project Number: 13MA0.01

Lab Number: L2021888
Report Date: 06/01/20

- 1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Difference: With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

PAH Total: With respect to Alkylated PAH analyses, the 'PAHs, Total' result is defined as the summation of results for all or a subset of the following compounds: Naphthalene, C1-C4 Naphthalenes, 2-Methylnaphthalene, 1-Methylnaphthalene, Biphenyl, Acenaphthylene, Acenaphthene, Fluorene, C1-C3 Fluorenes, Phenanthrene, C1-C4 Phenanthrenes/Anthracenes, Anthracene, Fluoranthene, Pyrene, C1-C4 Fluoranthenes/Pyrenes, Benz(a)anthracene, Chrysene, C1-C4 Chrysenes, Benzo(b)fluoranthene, Benzo(j)+(k)fluoranthene, Benzo(e)pyrene, Benzo(a)pyrene, Perylene, Indeno(1,2,3-cd)pyrene, Dibenz(ah)+(ac)anthracene, Benzo(g,h,i)perylene. If a 'Total' result is requested, the results of its individual components will also be reported.

PFAS Total: With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. If a 'Total' result is requested, the results of its individual components will also be reported.

The target compound Chlordane (CAS No. 57-74-9) is reported for GC ECD analyses. Per EPA, this compound "refers to a mixture of chlordane isomers, other chlorinated hydrocarbons and numerous other components." (Reference: USEPA Toxicological Review of Chlordane, In Support of Summary Information on the Integrated Risk Information System (IRIS), December 1997.)

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

- A** - Spectra identified as "Aldol Condensates" are byproducts of the extraction/concentration procedures when acetone is introduced in the process.
- B** - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).
- C** - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.
- D** - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.
- E** - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.
- G** - The concentration may be biased high due to matrix interferences (i.e. co-elution) with non-target compound(s). The result should be considered estimated.
- H** - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.
- I** - The lower value for the two columns has been reported due to obvious interference.
- J** - Estimated value. This represents an estimated concentration for Tentatively Identified Compounds (TICs).
- M** - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.
- ND** - Not detected at the reporting limit (RL) for the sample.
- NJ** - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.
- P** - The RPD between the results for the two columns exceeds the method-specified criteria.
- Q** - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility

EPA 624/624.1: m/p-xylene, o-xylene, Naphthalene

EPA 8260C: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.

EPA 8270D: NPW: Dimethylnaphthalene, 1,4-Diphenylhydrazine; SCM: Dimethylnaphthalene, 1,4-Diphenylhydrazine.

SM4500: NPW: Amenable Cyanide; SCM: Total Phosphorus, TKN, NO₂, NO₃.

Mansfield Facility

SM 2540D: TSS

EPA 8082A: NPW: PCB: 1, 5, 31, 87, 101, 110, 141, 151, 153, 180, 183, 187.

EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene,

3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.

EPA TO-12 Non-methane organics

EPA 3C Fixed gases

Biological Tissue Matrix: EPA 3050B

The following analytes are included in our Massachusetts DEP Scope of Accreditation

Westborough Facility:

MADEP MCP Response Action Analytical Report Certification

This form provides certifications for all samples performed by MCP methods. Please refer to the Sample Results and Container Information sections of this report for specification of MCP methods used for each analysis. The following questions pertain only to MCP Analytical Methods.

An affirmative response to questions A through F is required for "Presumptive Certainty" status		
A	Were all samples received in a condition consistent with those described on the Chain-of-Custody, properly preserved (including temperature) in the field or laboratory, and prepared/analyzed within method holding times?	YES
B	Were the analytical method(s) and all associated QC requirements specified in the selected CAM protocol(s) followed?	YES
C	Were all required corrective actions and analytical response actions specified in the selected CAM protocol(s) implemented for all identified performance standard non-conformances?	YES
D	Does the laboratory report comply with all the reporting requirements specified in CAM VII A, "Quality Assurance and Quality Control Guidelines for the Acquisition and Reporting of Analytical Data?"	YES
E a.	VPH, EPH, and APH Methods only: Was each method conducted without significant modification(s)? (Refer to the individual method(s) for a list of significant modifications).	N/A
E b.	APH and TO-15 Methods only: Was the complete analyte list reported for each method?	N/A
F	Were all applicable CAM protocol QC and performance standard non-conformances identified and evaluated in a laboratory narrative (including all "No" responses to Questions A through E)?	YES
A response to questions G, H and I is required for "Presumptive Certainty" status		
G	Were the reporting limits at or below all CAM reporting limits specified in the selected CAM protocol(s)?	YES
H	Were all QC performance standards specified in the CAM protocol(s) achieved?	NO
I	Were results reported for the complete analyte list specified in the selected CAM protocol(s)?	YES
For any questions answered "No", please refer to the case narrative section on the following page(s).		

Please note that sample matrix information is located in the Sample Results section of this report.

Project Name: CC HRE 2071 MASS AVE
Project Number: 13MA0.01

Lab Number: L2029601
Report Date: 07/20/20

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Case Narrative (continued)

MCP Related Narratives

Volatile Organics

In reference to question H:

The initial calibration, associated with L2029601-02 through -04, did not meet the method required minimum response factor on the lowest calibration standard for 1,4-dioxane (0.0024), as well as the average response factor for 1,4-dioxane. In addition, the initial calibration verification is outside acceptance criteria for dichlorodifluoromethane (181%).

The initial calibration, associated with L2029601-01, did not meet the method required minimum response factor on the lowest calibration standard for 1,4-dioxane (0.0012), as well as the average response factor for 2-hexanone and 1,4-dioxane.

The continuing calibration standards, associated with L2029601-01 through -04, are outside the acceptance criteria for several compounds; however, they are within overall method allowances. A copy of the continuing calibration standards is included as an addendum to this report.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

GLOSSARY

Acronyms

DL	- Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EMPC	- Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LOD	- Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
LOQ	- Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.) Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NDPA/DPA	- N-Nitrosodiphenylamine/Diphenylamine.
NI	- Not Ignitable.
NP	- Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.
STLP	- Semi-dynamic Tank Leaching Procedure per EPA Method 1315.
TEF	- Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.
TEQ	- Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.
TIC	- Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Footnotes

Report Format: Data Usability Report

Project Name: CC HRE 2071 MASS AVE
Project Number: 13MA0.01

Lab Number: L2029601
Report Date: 07/20/20

- 1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Difference: With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

PAH Total: With respect to Alkylated PAH analyses, the 'PAHs, Total' result is defined as the summation of results for all or a subset of the following compounds: Naphthalene, C1-C4 Naphthalenes, 2-Methylnaphthalene, 1-Methylnaphthalene, Biphenyl, Acenaphthylene, Acenaphthene, Fluorene, C1-C3 Fluorenes, Phenanthrene, C1-C4 Phenanthrenes/Anthracenes, Anthracene, Fluoranthene, Pyrene, C1-C4 Fluoranthenes/Pyrenes, Benz(a)anthracene, Chrysene, C1-C4 Chrysenes, Benzo(b)fluoranthene, Benzo(j)+(k)fluoranthene, Benzo(e)pyrene, Benzo(a)pyrene, Perylene, Indeno(1,2,3-cd)pyrene, Dibenz(ah)+(ac)anthracene, Benzo(g,h,i)perylene. If a 'Total' result is requested, the results of its individual components will also be reported.

PFAS Total: With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. If a 'Total' result is requested, the results of its individual components will also be reported.

The target compound Chlordane (CAS No. 57-74-9) is reported for GC ECD analyses. Per EPA, this compound "refers to a mixture of chlordane isomers, other chlorinated hydrocarbons and numerous other components." (Reference: USEPA Toxicological Review of Chlordane, In Support of Summary Information on the Integrated Risk Information System (IRIS), December 1997.)

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

- A** - Spectra identified as "Aldol Condensates" are byproducts of the extraction/concentration procedures when acetone is introduced in the process.
- B** - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).
- C** - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.
- D** - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.
- E** - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.
- F** - The ratio of quantifier ion response to qualifier ion response falls outside of the laboratory criteria. Results are considered to be an estimated maximum concentration. (DoD and NYSDEC Part 375 PFAS only.)
- G** - The concentration may be biased high due to matrix interferences (i.e. co-elution) with non-target compound(s). The result should be considered estimated.
- H** - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.
- I** - The lower value for the two columns has been reported due to obvious interference.
- J** - Estimated value. This represents an estimated concentration for Tentatively Identified Compounds (TICs).
- M** - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.
- ND** - Not detected at the reporting limit (RL) for the sample.
- NJ** - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.
- P** - The RPD between the results for the two columns exceeds the method-specified criteria.
- Q** - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration

Report Format: Data Usability Report

Project Name: CC HRE 2071 MASS AVE
Project Number: 13MA0.01

Lab Number: L2029601
Report Date: 07/20/20

Data Qualifiers

Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

- R** - Analytical results are from sample re-analysis.
- RE** - Analytical results are from sample re-extraction.
- S** - Analytical results are from modified screening analysis.

Project Name: CC HRE 2071 MASS AVE
Project Number: 13MA0.01

Lab Number: L2029601
Report Date: 07/20/20

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility

EPA 624/624.1: m/p-xylene, o-xylene, Naphthalene

EPA 8260C: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.

EPA 8270D: NPW: Dimethylnaphthalene, 1,4-Diphenylhydrazine; SCM: Dimethylnaphthalene, 1,4-Diphenylhydrazine.

SM4500: NPW: Amenable Cyanide; SCM: Total Phosphorus, TKN, NO₂, NO₃.

Mansfield Facility

SM 2540D: TSS

EPA 8082A: NPW: PCB: 1, 5, 31, 87, 101, 110, 141, 151, 153, 180, 183, 187.

EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.

EPA TO-12 Non-methane organics

EPA 3C Fixed gases

Biological Tissue Matrix: EPA 3050B

The following analytes are included in our Massachusetts DEP Scope of Accreditation

Westborough Facility:

Drinking Water

EPA 300.0: Chloride, Nitrate-N, Fluoride, Sulfate; **EPA 353.2:** Nitrate-N, Nitrite-N; **SM4500NO3-F:** Nitrate-N, Nitrite-N; **SM4500F-C, SM4500CN-CE,**

EPA 180.1, SM2130B, SM4500CI-D, SM2320B, SM2540C, SM4500H-B, SM4500NO2-B

EPA 332: Perchlorate; **EPA 524.2:** THMs and VOCs; **EPA 504.1:** EDB, DBCP.

Microbiology: SM9215B; SM9223-P/A, SM9223B-Colilert-QT, SM9222D.

Non-Potable Water

SM4500H,B, EPA 120.1, SM2510B, SM2540C, SM2320B, SM4500CL-E, SM4500F-BC, SM4500NH3-BH: Ammonia-N and Kjeldahl-N, **EPA 350.1:** Ammonia-N, **LACHAT 10-107-06-1-B:** Ammonia-N, **EPA 351.1, SM4500NO3-F, EPA 353.2:** Nitrate-N, **SM4500P-E, SM4500P-B, E, SM4500SO4-E, SM5220D, EPA 410.4, SM5210B, SM5310C, SM4500CL-D, EPA 1664, EPA 420.1, SM4500-CN-CE, SM2540D, EPA 300:** Chloride, Sulfate, Nitrate.

EPA 624.1: Volatile Halocarbons & Aromatics,

EPA 608.3: Chlordane, Toxaphene, Aldrin, alpha-BHC, beta-BHC, gamma-BHC, delta-BHC, Dieldrin, DDD, DDE, DDT, Endosulfan I, Endosulfan II, Endosulfan sulfate, Endrin, Endrin Aldehyde, Heptachlor, Heptachlor Epoxide, PCBs

EPA 625.1: SVOC (Acid/Base/Neutral Extractables), **EPA 600/4-81-045:** PCB-Oil.

Microbiology: SM9223B-Colilert-QT; Enterolert-QT, SM9221E, EPA 1600, EPA 1603.

Mansfield Facility:

Drinking Water

EPA 200.7: Al, Ba, Cd, Cr, Cu, Fe, Mn, Ni, Na, Ag, Ca, Zn. **EPA 200.8:** Al, Sb, As, Ba, Be, Cd, Cr, Cu, Pb, Mn, Ni, Se, Ag, TL, Zn. **EPA 245.1** Hg.

EPA 522.

Non-Potable Water

EPA 200.7: Al, Sb, As, Be, Cd, Ca, Cr, Co, Cu, Fe, Pb, Mg, Mn, Mo, Ni, K, Se, Ag, Na, Sr, TL, Ti, V, Zn.

EPA 200.8: Al, Sb, As, Be, Cd, Cr, Cu, Fe, Pb, Mn, Ni, K, Se, Ag, Na, TL, Zn.

EPA 245.1 Hg.

SM2340B

APPENDIX C

Public Notifications

September 30, 2020

Cambridge Public Health Department
119 Windsor Street, Ground Level
Cambridge, MA, 02139

Attn: Claude-Alix Jacob

**RE: MCP Public Involvement Notification
Permanent Solution Statement
2072 Massachusetts Avenue, Cambridge, Massachusetts
RTN 3-36458**

Dear Claude-Alix Jacob:

Pursuant to the Public Involvement requirements of the Massachusetts Contingency Plan (MCP), referred to as 310 CMR 40.1403, this letter is intended to provide notification that a Permanent Solution Statement with No Conditions is available for review. A copy of the submittal is available at the Northeast Regional Office File Facility of the Massachusetts Department of Environmental Protection (MassDEP), located at 205B Lowell Street, Wilmington, MA 01887 or through MassDEP's online file viewer. See link below.

<https://eeaonline.eea.state.ma.us/portal#!/search/wastesite>.

Information on the Site may also be obtained by contacting Mr. Samuel Butcher, LSP, Loureiro Engineering Associates, Inc. at 781-878-1272.

Sincerely,

LOUREIRO ENGINEERING ASSOCIATES, INC.
